

U.K.A.T. Rules

SCORE

For each individual throw, the score will be assigned for the sector in which the tool has been inserted. From 5 points for the center to scale up to 1 point for the outermost sector of the target.

In the event that the tool crosses the line between 2 scores, the higher score will be awarded.

For the score to be valid, the tool must be fixed. The visible part in contact with the surface of the target will determine what point you have obtained.

If the tool is not planted, or is planted outside the points area, zero points will be awarded.

The pitcher must have both feet behind the distance line from which he is pitching. If he touches the line with his foot, or crosses it (touching the ground beyond the line with his foot) before the tool has hit the target, the throw is null and void and zero points will be awarded.

The pitcher may move back from the throwing line but must keep at least 1 foot completely within the sector between the distance line from which he is pitching and the next.

If your front foot touches the line of the

next sector, the toss is null and void and zero points will be awarded. Your leading foot must not touch the next distance back.

The maximum score that can be obtained is 75 points per walk, and therefore 300 total points.

In case of disagreement between pitcher and scorer on the recording of scores, the intervention of a referee will be requested whose decision will be final and irrevocable.
